What's New in the AVG Email Server Edition?

AVG Email Server Edition allows organizations to protect email servers and user accounts from malicious messages, preventing the spread of viruses. It contains all basic features of AVG Email Client Edition, such as a UI, Anti-Spam, EMS (routing), EMS (SMTP), and EMS (VSAPI) components to defend from incoming, and outgoing emails, as well as virus removal. Additionally, this edition allows each user to have their own screen for local messages, either by selecting individual accounts, or by installing external clients. It is possible to use additional anti-virus clients from other vendors, or run more than one on the same computer. For extra security, it is possible to automatically remove all suspicious files from incoming or outgoing emails, or to only target certain types of content, such as executables, documents, and manual addition of custom extensions. Whitelists and blacklists can be configured so that only trusted messages are delivered, or so that only known messages are skipped. AVG Email Server Edition requires an enterprise license. File Information: Product Name: AVG Email Server Edition Product Version: 7.2.19103 Installation Type: Client and Server Active Installed: No Vendor: AVG State: Service Type: Client and Server Size: 9.4 MB Required Space: 107.0 MB Supported OS Platforms: x86 and x64 Installation Path: C:\Program Files\AVG\System\ See also List of antivirus software Comparison of antivirus software References External links AVG Corporate website Category:Anti-spam Category:Antivirus software Category:Anti-virus softwareQ: n_p times n_p matrix If P is a $n_p \times n_p$ matrix, how many n_p times n_p matrices can be defined by P? I only know how to prove the answer is $\frac{1}{2}n_p(n_p+1)$. A: First, just write out a specific P that represents these matrices. $$P = \pmatrix{\cdots&\pmatrix{0&1\\0&0}&1\\1&0&\cdots}$$ In general, any permutation matrix will work. There are $\frac{1}{2}n_p(n_p-1)$ such matrices. A: Assuming that the answer is $\frac{1}{2}n_p(n_p+1)$, then you can prove it by induction. If the answer is $\frac{1}{2}n_p(n_p$
