Have you ever spent a day, or weeks working on something that was only to end up being a waste of time? If you answered "yes" or "maybe" to these questions, chances are you're one of my clients. The most common failure for project performance development is that these projects set unrealistic goals and end up being good for nothing. They produce the wrong results, and the solutions that are supposed to be delivered fall short of what they promised. What Makes Project Performance Development Fail? Failure comes in many different shapes, sizes and levels. It can be project success, under delivery, over delivery, lack of resources, unrealistic expectations or lack of communication. I'm sure that you would agree that all project performance development failures can be traced to a common root. That common root is unrealistic expectations. There are many other factors that will determine the failure of your project, however unrealistic expectations and the resulting lack of performance are at the root of all other issues. Everyone will agree that performance is the greatest determinant of a project's success or failure, and that's what we will be

Development of a machine learning approach for predicting safety critical functions of passive safety-relevant components in automobiles. Functional safety is of fundamental importance in modern automobile design. Passive safety-related components such as bumpers, bumpers with light and light switch, airbag deployment trigger, and breakaway lamps contribute to functional safety. This study aims to build a tool that can be used for automatic detection of passive safety-related components in an automobile without human intervention. After extracting robust features from labeled data using a B-spline-based local template matching method, machine learning with the support vector regression technique was used to recognize safety-related components. Data from 3286 images was collected from 4 different clusters of images of vehicles with different appearances. Performance of this approach was evaluated by comparing the results with those of manual annotations. A real-time process was implemented by performing the safety-critical task to drive the vehicle and the images were taken with a camera equipped on a vehicle. The results indicated that the average relative error in detection was 4.56%. One of the most significant challenges is the amount of data. Thus, in this study we developed an automated data acquisition system. Further, because differences exist among individuals, the reliability of the approach will be increased by identifying individuals.The first week of August was a rough one for Kanye West fans, who were dealing with the reality that their god had passed away. Though many fans consider Kanye to be more of a musical genius than an actual genius, they still considered him a deity. Kanye West was known for his fashion sense as well as his eccentricities and his larger-than-life personality. No one expected that he would pass away at age forty-one, even though he was diagnosed with colon cancer back in 2005. It was announced by West's wife Kim Kardashian, to the shock of many people, that Kanye had passed away. "It is with a heavy heart that I'm letting you guys know that late last night, Kanye passed away. He was surrounded by his family, who were with him until the end. He was living his dreams, and he loved each and every one of you," she wrote in a handwritten letter. West's body was cremated earlier in the week.[Expression of P-gp in normal, benign and malignant ovarian tissues and its clinical significance].
