The Basics Of Photoshop There are four main areas of Photoshop. Layers Layers are the cornerstone of Photoshop's editing system. You can manipulate images by placing one layer over another, altering their colors, and even merging the two together to make a new layer. All the elements on a layer are completely separate in their own coordinate space, which means that if you move an element on one layer, it won't affect the other elements on the other layers. In addition, layers can be grouped together and edited as a single unit, though it's best to give them individual names so you can manage them easily. You can change the opacity of layers by choosing the "Layer > Layer Properties > Opacity" option from the Window menu or pressing F5. Photoshop's filter system lets you access filters that let you manipulate each individual layer's colors, light, and shade. Mask A mask is a way of erasing a part of a photograph by hiding pixels that were exposed in the original photograph. When a mask is set against a layer, it hides the pixels that are blacked out by the mask. Because the mask has been set against a layer, it can be moved around to easily hide or reveal the pixels. This layer can then be used to alter the original photo without affecting the pixels that were hidden. In addition, the mask functions as an undo layer because it enables you to remove the changes you've made to the image by simply removing the mask. Masks can be saved and loaded as Photoshop layers in order to conveniently use them over and over again. Adjustment Layers The tools found in Photoshop's Adjustment Panel let you make simple adjustments to the colors in images, without changing any data. With adjustment layers, you can adjust the brightness, contrast, and color intensity or hue of a photo. The Adjustment Layers are easily accessible thanks to the Adjustment Layers option that appears in the Window menu. By pressing the S key, you can create a new adjustment layer, which appears in the Adjustment Layers panel. You can drag the Adjustment Layers up or down as you make your adjustments. You can also apply a fill layer to a specific area by setting the Rectangle selection tool and drawing on the layer. Brushes Photoshop offers a range of tools that you can use to work with the image layers

Though it's true the cinematic double-take has been around for centuries, the best examples are those seen in classic movies such as *The Manchurian Candidate* or *Sunset Boulevard*. So it's both a crime and a blessing that 2014's best dramatic double-take is a straightforward *f/stop*. That's because it's a double-take that happens in silence, and only with the eyes. The premise of *Double and Straight*, a film that went under the radar at the Toronto International Film Festival, is simple: The camera zeroes in on the neck of a woman named Mina (Kristin Scott Thomas) as she looks into the mirror. She then immediately says, "Come on, it's a double-take. It's a double-take." Indeed, it is. But this is no dumb James Bond movie where the protagonist says something, falls on the floor, and the camera follows suit. It is, rather, a movie where the camera takes its time with one of the most existential questions humanity has ever asked. This very moment, though always an opportunity for a movie, still has a different meaning to Mina, at this very moment. To her, this "Come on, it's a double-take, it's a double-take" is something only she, at this moment, feels. Her soul is saying this. Her soul says that life is far too short to waste it on the trivialities of the self, and that while the mirror is a delusion, it is an existential fact that the soul, like the mirror, is indeed double. It's a moment that will only happen in a movie, and a moment that might only happen in one's own soul. Mina is not a character—she's a symbol for the woman we are, and the soul we are. Walking from side to side, front and back, is a way to walk through life. As in nature, all life is a double-take. In the same way that a deer approaches you, not knowing whether or not you are dangerous, we may walk toward the mirror, not knowing whether or not we are looking at a reflection of ourselves. So what do we, we ourselves, see when looking at ourselves in the mirror? Is it a reflection? That is

Q: Google spreadsheet formula - sum over last year I'm using this formula to calculate average weekly hours worked: =SUM((G:G)\*(H:H-E:E))/7 (G:G) is the age, (H:H) the hours, and (E:E) is the week number. It sums the hours from last year to the present week. However, I would also like to include last year in the average, so I thought I would also need to multiply with 1.5 to get last year as well. This would mean that I should add 1.5\*((G:G)\*(H:H-E:E)), right? But when I run the formula, I get no answer, and the cell just gets ignored. A formula reference says that SUM should work with ranges, and I tried moving the formula to one cell, but it didn't help. And a Google search for "google sum over last year" gives me a fair number of results, and most of them seem to suggest that this kind of thing should work. Any thoughts? A: =SUM((G2:G2)\*(H2:H2-E2:E2))/7 works for me. Poll question How would you rate your support for NHS confidentiality rules on doctors helping gay patients?
