This feature lets you build a model on an existing DGN file without having to physically create a CAD model first. One big advantage of this is that it enables you to reverse-engineer a DGN model without leaving the drawing window and without having to open the original DGN file. If you want to explore the features in more detail, here is the product description: DGNReverseEngineering enables you to reverse-engineer a DGN file and build a CAD model without having to open the
