Currently this includes new options in Exposure, Color, and Vibrance. All of these tools should be accessible to artists wanting to leverage the new 3D architecture, however they are not a part of the 3D architecture, and we expect them to be fully delivered in early Release Candidate The Substance Line products, most notably Substance paint and Substance painter, provide a complete range of tools to let you color in Photoshop. In 3D they can be used to paint on 2D planes, 3D planes, and custom 2D or 3D layers. As you know, Substance paint is native to Photoshop and works within Photoshop. As of this release Substance painter gets the new hidden 3D workspace. When working in this workspace, you will have a custom plate, and materials that are photo-realistic and will work with our new 3D architecture in Photoshop CS6.
