3-4 days ago Adobe announced Photoshop 2023 with a bunch of great new features. Since then, their support staff mentioned to me that none of the companies were using the Lightning Design System. Then I went for few days and the new features weren't available. I then went to their web site and saw it was on the site. I went back a few days later and now they are finally, finally, finally shipping Lightning Design System. I know others are seeing it now too. Old Photoshop users like myself are starting to get overwhelmed and confused because we have to upgrade and learn how to use the new software. The improvement on multi-person editing has been much needed as we need to get all the clients to be able to collaborate and rate the images. With Photoshop 2023, Adobe completely changed the organization from the older version. Layers became more complex, filters even more powerful. Also, the editing tools for live filters were improved, which was a really cool addition. If you want to add the new features, it's a bit of a hassle. It's easy for beginners, but I'm sure there's a 100 other designers just like me. I'm not complaining, just be prepared to dig your way through quite a few layers: if only there was a new layer called "Non-Photoshop designers" just to save time! But we're going to get tired of this year soon or later. The constant background and focus on new features is making me feel very fatigued. I always feel like the whole thing is a half-hearted effort. The constant re-skinning of apps seem like reimaginations rather than feature adds. Don't get me wrong, I like the new apps and the new features but they are version numbers that are based on marketing, not real time. We need to be getting product updates at a faster pace, so the new features start to be the focus instead of just being "enhancements."

Not every Photoshop feature is available for Windows users. -For example, Adobe introduced a new set of powerful 3D features in Photoshop Creative Cloud, such as the virtual pencil tool, which allows you to digitally draw on photos and designs. Photoshop is currently not available for macOS. These Features and others are available only on Windows. Adobe Imaging is encouraging the Adobe Portfolio, E-Commerce, and Print services to continue to stay relevant in the future. With a logo refresh in the last two years, the Adobe Portfolio (web-based gallery and e-commerce service for photographers) continues to be the premier showcase and commerce solution for professional-quality imagery.” With the recent announcement by Adobe that Photoshop is being used to create virtual reality (VR) content, it is apparent that the company will continue it's commitment to experimentation and pushing the boundaries of Photoshop. Pipeline as a Service (PaaS) is a style, a process, and an environment for creativity. The best way to break down a creative pipeline is to describe it as the series of equipment, processes, and skills—including knowledge of workflows, file formats, and tools—that publishers use to create a successful print or digital product such as a magazine, newspaper, album, book, or website. People who create and distribute content are increasingly choosing to do so in a digital format. However, designers and content creators still need to be able to integrate and manipulate content in the format they choose—whether it's photos, illustrations, video, or data.

The most fundamental change for 2020 is the rebooting of the 3D tool set, with the release of three native versions of Photoshop detailing their differences and their improvements over legacy 3D APIs. In fact, only three were launched. The first, Photoshop 3D, was launched exactly a year ago, on April 11, 2018. Photoshop 3D supports legacy APIs, and does not ship by default with any of the new pixel-based applications. The second, Photoshop 3D Professional, was released a full year ago. Its key features include:

- Extends and integrates the Creative Cloud 3D workflows into a standalone tool that can be installed without going through the Creative Cloud app
- Directly supports hardware with GPU-accelerated rendering and animation
- Advance content creation with native Photoshop content types such as Shapes and 3D objects, which were missing from the legacy APIs

The third new 3D tool, Photoshop 3D Artist, was announced June 25, 2019. The key features of Photoshop 3D Artist are:

- New content creation tools for artists using features in their existing workflow
- Photorealistic animation and simulation with HDR rendering and LUTs, and new 3D artists features

Adobe has additional preview versions of Photoshop 3D to share with customers, though I am not aware of any of these features being official 3D Photoshop features we will see in the near future. As outlined in the table below, the only 3D features which are being shipped with the native pixel-based applications in 2020 are the Photoshop 3D Installer, the Photoshop 3D Pro and the Premiere Pro Instances 3. While Photoshop 3D Installer is a tool to let users install old versions of the software via their DVDs, the other two are the native versions. Photoshop 3D Pro was rolled out to Apple CC 2019 and CC 2020 customers; Premiere Pro Instances 3 is a standalone expansion of the product.
