Nice Review - I would like to know where you get your information on the python & web-based features. From a non developer point of view I can see how intelligent this version is compared to other versions. I can not use the python or web-based features myself.

Mark Your thoughtfulness is appreciated. I went into this project with an eagerness to return to using a computer as a kind of "digital painter's palette." I found the release as good as expected and very fast on a MacBook Pro (13-inch, Mid-2015). I was having achievements with panels view. My only concern is that the less attractive Adobe libraries would attract some light vandalism of my images. I think the new stuff is A-OK for non-pros. The last time I checked Photoshop, I was just a little in mourning over the new releases and the drop in prices relative to the competition. I wonder if they'll ever catch up. Craig,

I think you're right about me as a consumer. I have rarely used the web based feature, and I'm sure not an avid user of the Python features. However, I have used some sort of licensing before--Adobe Creative Suite 5 and a stand alone software suite called Adobe Design Premium. See my long professional history with the ACS:
